

THE SOURCE

Producer	Weszeli		
Wine	2012 Riesling, "Steinmassl"		
Region and Country	Austria		
Varietal(s)	Riesling		
Terroir	The expanse of nearly 4000 hectares of vines in Lower Austria's Kamptal wine region follows a final north to south segment of the Kamp River before it joins the Danube not too far down stream. Here there is an immense variation of soil and bedrock types and microclimates. However, what all vineyards in the Kamptal have in common (as does much of the winegrowing regions in Lower Austria, or Niederösterreich) is the tug of war between the warm Pannonian winds from the east and the Waldviertel cool air that comes in from the northwest. Steinmassl is located to the west and slightly north of Langenlois, the cultural heart of Kamptal.		
Soil	Metamorphic bedrock (principally paragneiss and orthogneiss with mica-schist and amphibolite) a topsoil of various depths (some as deep as a meter) of decomposed bedrock, stony sedimentary deposits with calcareous influence, iron and clay.		
Irrigation	Forbidden—Never—Sometimes	Technical Precision	Nature—Moderate—Nurture
Vine Age	Planted in 1991	Altitude(m); Aspect	270-320; South
Vinification	Weszeli remains flexible in order to work around their philosophical ideas that may not match with the needs of each vintage. Generally, each vineyard is picked three times: the first grapes are used for entry-level wines or sparkling base, the second for blending options used for entry-level wines and the last (best) are kept for the Erste Lage and Purus wines. Once the grapes for the Erste Lage are picked they are whole bunch macerated between 6-18 hours—longer in cooler years, shorter in hotter ones. The first sulfite addition is usually made after the 2-3 month spontaneous alcoholic fermentation in stainless steel is completed. Malolactic fermentation may happen (if there is no addition of sulfite for a good length of time, which allows for lower sulfite levels), although it's not desired.		
Aging	18 months in stainless steel. Filtered with plate and frame.		
Farming	Drink Young—Short-Term Benefits—Long-Term Benefits—Unknown In 2017 Organic conversion started and in 2019 Biodynamic conversion will begin.		
Enological Additions	Sulfur Dioxide		

Observations (subjective and abstract; based on young wines)

General Impressions

Ageability	Drink Young—Short-Term Benefits—Long-Term Benefits—Unknown		
Intensity	Subtle—Vigorous—Electric	Body	Light—Medium—Full
Core	Lithe—Medium—Dense	Tannin	Light—Medium—Full
Acidity	Light—Medium—Full—Electric	Wood Presence	Light—Medium—Full—Electric
Texture	Lithe—Medium—Dense	Finish	Front—Middle—Back
Mineral Impressions	Lightly Salty—Salty—Metal—Mineral—Wet Stone—Flint—Graphite—Reductive—Petrol		

Lab Analysis (general range)

Alcohol %	12.5-13.0	Titrateable Acidity (g/L)	6-7.5
pH	3.15-3.25	Residual Sugar (g/L)	>4
Total SO2	None Added—Very Low—Low—Medium—High
